

ACCU-CAST™

4 Grades Available

390 S2 – 3 min. set @ **32°C** water temperature, high tear strength, smooth flow, **great detail**, good for smaller projects. **Yellow/Buff** in colour.

IBG (Imperial Body Gel) – 5 min. set @ **32°C** water temperature, **ultra smooth**, high tear strength – even when mixed thin, great detail. **Orange** in colour.

LS680 – 6 min. set @ **27°C** water temperature, **ultra low slump**, used for full head moulds, comfortable for subject. **Green** in colour.

880 – 8 min. set @ **27°C** water temperature, extra long set **for big projects**, good detail. **Blue** in colour.

Description

Accu-Cast is an advanced irreversible hydrocolloid moulding material. There are 4 different formulas of Accu-Cast. They are formulated to have very low shrinkage rates, high tear strength, fine grain, and a warm water mix. These materials far exceed the common expectations of moulding materials in the SFX Makeup Industry.

Benefits

- Low Shrinkage Rate – Resists “pull-away” from plaster bandage for over 60 minutes.
- High Tear Strength – Easier to remove mould from subject without tearing.
- Fine Grain – Good surface detail and hard smooth surface on stone cast.
- Calibrated Set – Different setting times allow you to match your impression material to the job.
- Thicker Mix – When mixed thicker, Accu-Cast will not drip like typical materials.

Shrinkage - (when covered with wet towelling)

10 minutes	<0.10%	40 minutes	0.46%
20 minutes	0.16%	50 minutes	0.62%
30 minutes	0.33%	60 minutes	0.75%
