

Focus on **Banana-Skin**

Innovation in mould making ...

RTV Silicone that works like latex ! ...

Banana Skin will revolutionize your mould making and parts casting.

Ever said to yourself (and your suppliers!), "wish there was a silicone that stretched like latex?". Admit it ... most seasoned mould makers and casters have had this long time desire. Banana-Skin is the answer.

High tear strength and high elongation makes Banana-Skin the perfect choice for producing one (or two) part glove and skin moulds from pieces with medium undercuts. Moulded parts can be produced without seams.

Banana-Skin is a shore 13A two-component silicone elastomer that cures at room temperature by a poly-addition reaction, offers an extremely low mixed viscosity and curing can be accelerated by heating.

Mixing of Banana-Skin's two components is made easy and discernible with a coloured catalyst and a long pot life allows for trouble-free skin and glove mould making procedures, which are well suited for Banana-Skin.

And the name? So called cos, well...
